## VIET NAM

### Moving up the trade facilitation ladder towards seamless international supply chains

[Cumulative implementation scores of core groups of measures; full implementation =100]

The level of implementation of trade facilitation measures in Viet Nam (49%) is above the level in Asia-Pacific (46.5%). It is however below the level of implementation in South-East Asia (56%). Among the five core groups of trade facilitation measures, the most implemented in Viet Nam are “Transparency” measures (73.3%). The least implemented are “Cross-border paperless trade” measures (22.2%).

Implementation of “Transparency” measures is above the regional average but below the sub-regional average. The measures least implemented in this area in Viet Nam are *Publication of regulations on the internet, Advance publication of regulation before implementation, Advance ruling, and Independent appeal mechanism*. Implementation of improved “Formalities” is above the regional and sub-regional average. The least implemented measures in this area are *Risk management, Pre-arrival processing, Post-clearance audit, Separation of Release and Clearance, Publication of average release times, TF measures for authorized operators and Acceptance of paper or electronic copies*.

In “Paperless trade”, Viet Nam’s implementation is below both the regional and sub-regional averages. *E-Trade licenses, E-Preferential Certificate of Origin, and E-Application for Customs refunds* are least implemented.

Viet Nam may focus its trade facilitation efforts in particular on full implementation of “Paperless trade” measures, as well as on moving towards “Cross-border paperless trade”.
